

APPENDIX KK

WATER COMMODITY CODES

A. GENERAL

The water commodity, type cargo, and special handling codes are a five-position combination. This combination is obtained using Appendices KK, LL and NN. The first three positions of the code identify the water commodity. The fourth position further identifies certain types of cargo, primarily those that are hazardous (Appendix NN) and is used with the fifth position to indicate the nature of a commodity or item, which may require special handling (Appendix LL). The specific special handling requirements are further identified in trailer data, e.g., actual temperature control range, type of hazardous materiel, or outsize dimensions.

NOTE: The Military Surface Deployment and Distribution Command will convert the water commodity code to the Federal Supply Code and pass it to the United States Transportation Command for Defense Transportation System surface shipments.

The most current versions of the codes are available at the Table Management Distribution System website at: <https://TMDS03.scott.af.mil/>.
